

PHINS — Grove VC Investor Evening Brief (19 August 2026) · Public Presentation of PHINS hosted by Mr. Lotan Levkovitch

Internal · Confidential — public-speaking brief for presenting PHINS from the stage to a ~30-person audience at the Grove VC investor evening, hosted by Mr. Lotan Levkovitch (Partner, Grove VC). This is public speaking to a room — **not a 1-on-1 introduction meeting**. Do not share internal drafts before the event.

Event facts

Item	Detail
Date	19 August 2026
Time	19:00
Duration	25 minutes (20 on stage + 5 Q&A — hard timebox)
Format	Public presentation — one speaker, slides, ~30 in the audience (partners, LPs, portfolio founders, guests)
Host	Mr. Lotan Levkovitch — Partner, Grove VC
Location	TBC
Status	Scheduled
Pack	Pitch dashboard — Grove VC 19.8 section

Purpose: a public presentation of PHINS to the room — the ****global problem**** it is built to solve (shrinking long-term covers, national insurance systems under predicted strain worldwide), the **founder** and **technology**, the **technology-vs-human-touch** economics across underwriting, billing, claims and agents, **regulation**, and **funding** — converting audience interest into booked follow-up meetings.

Elevator pitch — 30 seconds

The world is losing its long-term cover: private carriers are retreating from disability / LTC lines and national insurance schemes face predicted collapse globally. PHINS is an **AI-operated insurance operating system** already in production that automates the human-touch layer — underwriting, billing, claims, agents — so lifelong cover becomes affordable again, on a hash-chained

ledger where **AI recommends but never posts**. Founder-led, regulator pathway documented, raising an **ILS 6.0M seed at ILS 24M pre-money**.

The global problem — open with the need, not the product

- **Long-term covers are disappearing.** Private carriers worldwide are withdrawing from, re-pricing, or capping standalone long-term care and lifelong disability lines.
- **National insurance is under predicted collapse — globally.** Ageing populations and shrinking worker-to-beneficiary ratios put pay-as-you-go state disability / LTC schemes on projected deficit paths; benefit erosion is already visible.
- **The gap lands on households** exactly when demographic need peaks.
- **Why the market failed:** human-heavy operations (underwriting, billing, claims, agent distribution) make long-duration cover uneconomic to originate and administer at accessible premiums.
- **The PHINS thesis:** remove the human-cost layer with an AI-operated platform so long-term cover becomes affordable, sustainable, and globally scalable — Israel first, multi-market on one codebase.

Technology vs human touch — where the savings come from

Function	Traditional (human touch)	PHINS (AI-operated)	Automation
Underwriting	Manual underwriter review; days–weeks per case	AI severity models decide in minutes; humans only on flagged edge cases	~92%
Billing	Manual invoicing, reconciliation, collections teams	Automated billing, auto-pay, and dunning on the platform ledger	~96%
Claims	Adjuster-led handling; loss-adjustment expense on every claim	AI triage + fraud detection; human adjudication only for complex or contested claims	~88%
Agents / distribution	Commission-loaded agent networks driving acquisition cost into the premium	Digital-first onboarding plus a tooled agent ecosystem; commission loading engineered down	Digital-first

So what: the human-touch layer is the bulk of a traditional insurer's expense loading on long-duration business. Automating it is what turns unaffordable long-term cover into an accessible product — planning basis: expense ratio improving ~1.5pp annually through AI automation (adjustable in the Scenario Lab). Humans stay exactly where they add judgment: edge-case underwriting, complex claims, and governance — ****AI recommends, the ledger decides, people supervise****.

25-minute stage talk — run of show, hard timeboxes

Minutes	Segment	Talking points & source
00–02	Hook — the cover gap	Open on the audience, not the product: long-term covers are vanishing worldwide while the need for them grows.
02–06	The global problem	National insurance under predicted collapse globally — ageing, dependency ratios, projected state-scheme deficits; households left uncovered; why human-heavy economics made the market fail.
06–10	PHINS — founder & technology	Founder story compressed; AI-operated insurance operating system in production; integrity contract — AI recommends, ledger decides; multi-market on one codebase.
10–14	Technology vs human touch	Walk the four cost centres — underwriting ~92%, billing ~96%, claims ~88% automated, digital-first agents — and translate automation into the savings that make long-term cover affordable.
14–17	Regulation	Israel Authority pathway; digital MGA / platform posture; regulatory application memorandum published; regulatory adapters as the route to global markets.
17–19	Funding	Seed ask ILS 6.0M / ILS 24M pre / ILS 30M post ; use of funds in one sentence; what a diligence conversation would cover.
19–20	Close & call to action	Invite follow-up meetings; point the room to the executive summary handout; thank the host.
20–25	Audience Q&A	Moderated by the host; park deep diligence questions for follow-ups; log themes in the Meeting Diary.

Run-of-show rules: this is a stage presentation to a ~30-person audience, not a 1-on-1 and not a workshop. One speaker with slides; no live demo unless the host requests it; questions held to the moderated Q&A block; hard stop at 25:00.

Pre-meeting preparation (stage + audience of ~30)

- **Slide deck** loaded and tested on the venue screen; confirm projector / clicker with the Grove VC host.
- **Israel pitch executive summary (audience handout)** — print ~35 copies + QR link — `/investor-docs/israel-pitch-executive-summary.pdf`.
- **Israel regulatory application (EN)** — `/investor-docs/israel-regulatory-application-en.pdf` (offer HE if preferred) — for follow-ups, not the stage.

- **NDA** ready for interested attendees — `/legal/nda.html`
- Business plan link reserved for follow-up meetings, not the presentation

slot.

Decision outputs — leave the room with

- 1 A list of **interested attendees** and their firms, with follow-up

meetings proposed on the spot where possible.

- 1 A clear read from **Grove VC** (via the host) on partnering for the round.

- 2 The recurring **Q&A themes** — the diligence questions the room cares

about most.

- 1 Outcome and follow-ups logged in the Meeting Diary on the pitch dashboard.

Data integrity notice: this brief is an operational admin preparation tool. The funding figures (ILS 6.0M seed · ILS 24M pre · ILS 30M post) are the canonical planning basis used across the pitch dashboard — not commitments or guidance. The global-problem narrative and automation-vs-savings comparison are presentation framing built on the platform's published automation benchmarks and adjustable Scenario Lab assumptions — not actuarial projections. The agenda, prep list, and decision outputs are internal planning aids and this document does not write to the platform ledger.
