PHINS — Unified Business Plan, Investor Deck & Appendices · One standard · Adjustable factors

Edition: October 2026 · one standard · adjustable factors

Plan identity: `unified-2026.10-v1` · content hash `9128223e1c2223881e0eca64ae6922654b79d52bb2eed151beb726f3c4c1589f`

Audience: venture and angel investors, carriers, reinsurers, supervisors and local partners.

Companion: the live, adjustable edition is `/business-plan.html`; the model is `GET /api/business-plan/model`. This file is generated from the same model by `scripts/build_business_plan.py` and must not be edited by hand.

> Planning identity only. Public market evidence stays in the Scenario Lab, locked and separate; no figure here writes the platform ledger, the actuarial store or any statistic.

Headline figures

Figure	Value
Annual risk premium (kernel specimen, age 42)	₪4,518
PHINS take / carrier share	25% / 75%
Israel in force, end-2029 / end-2031	230,554 / 471,621
Markets on the platform by 2031	10
Group PHINS revenue 2031 (ILS / USD at planning FX)	₪749.1M / $203.6M
Group EBITDA margin 2031	57%
Seed / pre-money / post-money	₪6.0M / ₪24M / ₪30M
Series A indication (2028)	₪18.0M
Actuarial appraisal (anchor book)	₪264.6M
Integrity	all identities hold

Part I — Business plan

1. Executive summary

PHINS is an AI-operated insurance and savings platform. It writes a new regulated contract — life insurance with a lifelong severe-disability (ADL-3) mechanism — on the paper of a licensed carrier, runs the whole operation (chat intake, underwriting, claims, billing, actuarial, reinsurance reporting, marketplace, savings flow) on one platform, and enters every market through a local partnership. The platform is the company; the Israel contract is the first use of it.

The anchor plan is a single, table-driven identity: ₪4,518 annual risk premium at the age-42 specimen, 25% PHINS take / 75% carrier share, 8% churn, 25,000 / 75,000 / 150,000 new issues in 2027–2029 and 150,000 a year after. It produces 230,554 policies in force by end-2029 and 471,621 by end-2031 in Israel alone, with PHINS revenue of ₪183.3M in 2029 and ₪467.5M in 2031.

The expansion plan replicates that ramp into OECD partner markets — 10 markets on one platform by 2031. Each partner market follows the Israel path at 50% scale from its launch year; PHINS keeps 60% of the platform take and carries only platform opex. Group PHINS revenue reaches ₪749.1M ($203.6M at the planning FX) in 2031 at a 57% EBITDA margin; group risk GWP reaches ₪3.75B.

The round is ₪6.0M seed on ₪24M pre-money (₪30M post, 20% dilution). 2027 is the only loss year in the anchor book (₪18.8M burn); the group's peak cumulative need is ₪20.2M, which sets a Series A indication of ₪18.0M in 2028 to fund scale, not survival. The actuarial appraisal of the same anchor book at a 35% discount rate, 4.0× 2029 net revenue and 15% prudence is ₪264.6M; the ask is 9% of it.

Every figure in this document, the deck and the appendices regenerates from one factor register (unified-2026.10-v1) and is checked by structural identities on every render; the content hash 9128223e1c222388… reproduces them. Public evidence is never written by a planning assumption.

2. Company and method — one platform, local partnerships

PHINS builds technology, not balance sheet. In every market the contract is carried by a licensed insurer, reinsured through a quota-share treaty, and distributed with a local partner; PHINS supplies the product design, the pricing kernel, the AI agents and the operating platform as a one-stop shop. The method is identical everywhere — only the carrier, the supervisor and the partner change.

Four flows run on the platform: protection (life + ADL-3, long-term-care solutions), savings (a separately licensed add-on managed as part of the solution), consumption (a health marketplace with coverage-aware ranking and a wallet) and intelligence (underwriting, claims, risk-report and customer agents that recommend while humans decide). The same ledger, identity master and document standard sit under all four.

The organisation is sized to the take: the anchor book's opex is cost-per-average-life by year, so the plan grows headcount with lives rather than ahead of them. Partner markets add platform, actuarial and compliance capacity only (35% of Israel intensity); distribution and local operations are the partner's.

3. Market and OECD partnership map

Israel is the anchor: high home-care orientation, a large private long-term-care base, visible public spend and a supervisor already engaged (pre-ruling track, 12 October 2026). From there the plan sequences OECD members where a Solvency II or equivalent carrier can carry the contract and a local partner wants a digital severity layer beside public provision: Portugal and Western Europe, Sweden, Canada, the United States, Australia and Japan, with Bulgaria (accession candidate) and the UAE as partner-led top-up markets.

Market evidence stays in the Scenario Lab, locked and separate. This plan does not restate TAM: it plans lives. The kernel premium is the same ILS-denominated specimen in every market, converted at planning FX pins (Appendix A), so a partner market is comparable with Israel line by line.

Launch schedule: 1 partner market(s) in 2028, 2 in 2029, 3 in 2030 and 3 in 2031 (10 markets including Israel). Every launch count, the ramp scale and the platform share are adjustable factors; the regulatory pathway per market is in Appendix C.

4. Products and solutions

First contract — life insurance with a lifelong disability mechanism. Life face ₪1,000,000 with a disability sum of ₪250,000 below 65 (1:4) and a 1:1 mechanism from 65; the disability trigger is permanent loss of three or more activities of daily living. The kernel prices the specimen at ₪376.50 a month (₪313.75 life + ₪62.75 disability at the 1.255 age-42 factor), ₪4,518 a year, from the published risk_reference_v1 tables (0.25 / 0.20 per ₪1,000 monthly).

Long-term-care solutions. The same severity trigger funds a care benefit delivered through the marketplace (home care, residential care, equipment) with coverage-aware ranking, so the benefit buys care rather than cash alone.

Savings flow. 30% of in-force elects a 3.0× savings add-on at default, producing ₪660.0M of savings flow in Israel in 2029 and ₪3.37B across the group in 2031. Savings is a separately licensed flow managed as part of the solution; it is not insurance GWP and is not split with the carrier. Its fee economics are upside to this plan, not inside it.

Marketplace and wallet. Suppliers are invited, network-governed participants; the health wallet is the checkout and reimbursement centre; delivery bidding and supplier settlement run on the platform ledger.

5. Technology — the one standard

The technology section is the same in every PHINS document because it is read from the repository, not written: 136 service modules in 6 packages, 8 API modules, 20 repositories, 14 security modules and 288 test files at the time of rendering. The platform is a single Python service with a database-backed durable layer (PostgreSQL / SQLite), a generalized job queue, and a hash-chained ledger.

Ten standards define what 'PHINS technology' means in a partner market, listed in Appendix D: one pricing kernel, append-only integrity, AI governance (agents recommend, humans decide), an evidence pipeline with provenance, durable checksummed agent state, one identity writer, shared security utilities, chat intake beside classic forms, marketplace and payments on the ledger, and one document standard. A partner receives the whole set; nothing is forked per market.

6. Go-to-market and partnership model

Israel: direct digital intake (Phin chat and classic application) on the carrier's paper, agents and bancassurance as additional channels, the Authority's pre-ruling track for the filing. The gates are dated (Appendix G): sales 1 January 2027, 1,000 policies, 24,000 in force by year-end.

Partner markets: PHINS signs a local licensed carrier and a distribution partner, deploys the platform unchanged, and shares the take — 60% to PHINS, 40% to the partner at default. The partner carries distribution and local operations; PHINS carries platform, actuarial and compliance support. A partner market is live when its supervisor has the filing and the carrier has the treaty.

Reinsurance: a quota-share treaty (18% cession, 25% ceding commission at default) sits behind every carrier from day one; the carrier view in Appendix B is what the reinsurer sees.

7. Financial plan (ILS, five years)

Anchor book (Israel). Risk GWP ₪54.2M → ₪733.3M → ₪1.87B; PHINS revenue ₪13.6M → ₪183.3M → ₪467.5M; opex ₪32.4M → ₪116.9M → ₪202.9M; EBITDA –₪18.8M → ₪66.5M → ₪264.5M. 2028 is already EBITDA-positive (₪0.3M).

Partner markets. 1 market in 2028, 3 in 2029, 9 in 2031; PHINS revenue ₪28.1M in 2029 and ₪281.6M in 2031 after the partner's share of ₪187.7M.

Group. Risk GWP ₪3.75B and PHINS revenue ₪749.1M in 2031 ($203.6M at 3.68 ILS/USD), EBITDA ₪423.7M (57% margin), cumulative EBITDA ₪683.3M. Full tables are in Appendix F.

8. Capital plan and the round

Seed ₪6.0M on ₪24M pre-money, ₪30M post (20%). Use of funds: product and technology ₪2.4M (40%); regulatory, actuarial and reinsurance ₪1.2M (20%); distribution and local partnerships ₪1.5M (25%); operations and reserve ₪0.9M (15%).

Funding path. The anchor book's 2027 burn is ₪18.8M; the group's cumulative cash low point is ₪20.2M (2028, as the first partner market ramps). The Series A indication is that need less the seed plus a 25% buffer: ₪18.0M, rounded up to ₪0.5M. Group EBITDA turns positive in 2029 and cumulative EBITDA in 2029.

Valuation reference. The actuarial appraisal of the anchor book (PV of 2027–2029 EBITDA plus 4.0× 2029 net revenue, discounted at 35%, less 15% prudence) is ₪264.6M. The ₪24M ask is 9% of that appraisal; the same formula drives the Monte-Carlo simulator on the pitch dashboard.

9. Risks and mitigations

Risk	What could go wrong	Mitigation in the plan
Regulatory timing	A filing slips or a jurisdiction requires a different carrier structure.	Pre-ruling track opened before sales; carrier-of-record model in every market; the pathway table in Appendix C is maintained per jurisdiction.
Claims experience above plan	The lifelong ADL-3 trigger runs above the 62% expected claims ratio.	Quota-share cession (18%) with ceding commission; kernel repricing through the one writer; the carrier view (Appendix B) is restated on every plan refresh.
Persistency below plan	Churn runs above 8%.	Persistency is an explicit factor; the plan is recomputed, never patched. Savings add-on raises retention and is outside risk GWP.
Partner dependence	A local partner underdelivers on distribution.	Partner ramp is set at 50% of the Israel path by default; PHINS keeps 60% of the take and carries only platform opex (35% of Israel intensity).
Technology and AI governance	An agent decision is wrong or unexplainable.	Agents recommend, humans decide; every decision is logged with evidence provenance; thresholds are promoted only through an audited step; golden sets gate CI.
Data integrity	A figure on an investor surface disagrees with another.	One factor register; integrity identities computed on every render; content hash 9128223e1c222388… reproduces the exact figures.
Capital	The seed does not reach cash break-even on its own.	It is not meant to: ₪6.0M funds the build and the first ₪18.8M year of sales; the peak cumulative need of ₪20.2M is covered by the Series A indication of ₪18.0M (25% buffer).

10. Governance, milestones and team

Decisions that move money or risk are human: underwriting and claims agents recommend, the underwriter and adjuster apply; thresholds are proposed read-only and promoted only through an audited admin step; the regulator has a sealed read-only outline that reconciles to the financial books.

The team is sized by the opex intensity of the anchor book (platform, actuarial, underwriting, claims, customer operations, compliance) and extended per partner market by platform, actuarial and compliance support only. An Appointed Actuary reviews experience against the kernel at each gate.

When	Gate
12 Oct 2026	Regulatory pre-ruling meeting with the Capital Market, Insurance and Savings Authority (Jerusalem); MGA bridge and filing scope.
Q4 2026	Seed close (₪6.0M on ₪24M pre-money); carrier and reinsurance term sheets for the first contract.
1 Jan 2027	Gate 5 — sales begin on the licensed carrier's paper through the PHINS platform (Phin chat intake and classic forms).

When	Gate
H1 2027	Gate 6 — first 1,000 policies in force; Appointed Actuary review of experience against the kernel.
Q4 2027	Gate 7 — 24,000 end-of-year in-force; Series A readiness; first partner-market preparation.
2028	First partner market live under a local licensed carrier; Series A (₪18.0M indicative) funds scale, not survival.
2029	230,554 in force in Israel; group EBITDA positive (2029); 3 partner markets live.
2031	10 markets on one platform; 1,057,350 lives; ₪749.1M PHINS revenue at a 57% EBITDA margin.

Part II — Investor deck

Slide 1 — PHINS

AI insurtech platform · one-stop-shop technology · local OECD partnerships

- Life + lifelong ADL-3 disability, long-term care, savings flow and a health marketplace — one regulated contract family, one platform.
- Carried by licensed insurers, reinsured by quota share, distributed with local partners; PHINS is the technology.
- Seed ₪6.0M on ₪24M pre-money. unified-2026.10-v1 · hash 9128223e1c222388…

Slide 2 — The problem

- Severe disability and long-term care are the protection gap that public systems and legacy carriers leave open; savings sit in a separate silo.
- Carriers cannot ship a digital severity product: pricing, underwriting, claims and distribution live in different systems with no shared integrity.
- Partners in each OECD market want the product and the technology, not a new balance sheet.

Slide 3 — The solution

- A life contract with a lifelong disability mechanism (1:4 below 65, 1:1 from 65) priced by one kernel: ₪4,518 a year at the age-42 specimen.
- Phin chat intake, underwriting bot, claims bot, risk reports, customer agents — all recommend, humans decide, every decision logged with evidence.
- Savings add-on (30% election × 3.0×) and a coverage-aware marketplace turn the benefit into care and wealth.

Slide 4 — Why now

- Supervisor engaged: pre-ruling track with the Capital Market, Insurance and Savings Authority opened 12 October 2026.
- Demographics and public spend make the gap legible to regulators, partners and customers.
- AI operating model is built: 136 service modules, 288 test files, golden sets gating CI.

Slide 5 — Product and pricing

- Kernel specimen: ₪313.75 life + ₪62.75 disability = ₪376.50 a month at the 1.255 age-42 factor.
- Risk GWP splits 25% PHINS / 75% carrier; savings flow is a separate licensed flow, never split.
- Published tables 0.25 / 0.20 per ₪1,000 monthly; same specimen in every market, converted at planning FX.

Slide 6 — Market and expansion

- Israel anchor: 24,000 → 230,554 → 471,621 policies in force (2027 / 2029 / 2031).
- OECD partner markets: 1 in 2028, 3 in 2029, 9 by 2031 — 10 markets on one platform.
- Group lives 1,057,350 and risk GWP ₪3.75B in 2031.

Slide 7 — Business model

- PHINS take 25% of risk GWP pays for distribution, underwriting, claims, billing and the agents.
- Partner markets: 60% of the take to PHINS, 40% to the local partner who carries distribution.
- Opex is cost per average life by year; partner markets add 35% of Israel intensity.

Slide 8 — Technology — one standard

- 136 service modules · 8 API modules · 20 repositories · 14 security modules (live census).
- One pricing kernel, hash-chained ledger, AI governance, evidence provenance, durable checksummed agent state, one identity writer.
- One document standard: navy / gold letterhead, shield emblem, Inter + Space Grotesk — chrome never changes figures.

Slide 9 — Milestones

- 12 Oct 2026 pre-ruling · Q4 2026 seed close · 1 Jan 2027 sales begin.
- Gate 6 first 1,000 policies · Gate 7 24,000 in force and Series A readiness (Q4 2027).
- 2028 first partner market · 2029 group EBITDA positive · 2031 10 markets.

Slide 10 — Financials (ILS)

- PHINS revenue: ₪13.6M (2027) → ₪211.5M (2029) → ₪749.1M (2031); EBITDA –₪18.8M → ₪71.6M → ₪423.7M.
- 2031 EBITDA margin 57%; cumulative EBITDA ₪683.3M.
- Anchor book alone: ₪467.5M revenue and ₪264.5M EBITDA in 2031.

Slide 11 — The round

- Seed ₪6.0M on ₪24M pre (₪30M post, 20%). Use of funds: tech 40% · regulatory & actuarial 20% · partnerships 25% · operations 15%.
- 2027 burn ₪18.8M; peak cumulative need ₪20.2M; Series A indication ₪18.0M (2028) funds scale, not survival.
- Actuarial appraisal ₪264.6M (35% WACC, 4.0× 2029 net revenue, 15% prudence); the ask is 9% of it.

Slide 12 — Integrity

- Every figure regenerates from one factor register; structural identities are checked on every render: all identities hold.
- Anchor book reconciles to the Investor Meeting book and the pitch-dashboard simulator; planning never writes public evidence.
- Content hash 9128223e1c222388… — same inputs, same figures, for any party.

Part III — Appendices

Appendix A — Actuarial basis and pricing kernel

The specimen is priced by `services/pricing_kernel.py` from the published `risk_reference_v1` tables: life 0.25 and disability 0.20 per ₪1,000 monthly, times the locked age curve (factor 1.255 at age 42). Life face ₪1,000,000; disability sum ₪250,000 below 65 (1:4) and 1:1 from 65. Issue ages 3–65.

Specimen line	Value
Age / age factor	42 / 1.255
Life sum / disability sum	₪1,000,000 / ₪250,000
Life monthly / disability monthly	₪313.75 / ₪62.75
Total monthly / annual	₪376.50 / ₪4,518

Same specimen in every planning market (ILS face, local currency at the planning FX pin — never live FX, never evidence):

Market	OECD	Currency	Planning age	Kernel premium (ILS)	Kernel premium (local)
Israel	member	ILS	42	₪4,518	4,518 ILS
Portugal	member	EUR	42	₪4,518	1,130 EUR
Western Europe (EUR)	member region	EUR	42	₪4,518	1,130 EUR
Sweden	member	SEK	42	₪4,518	13,321 SEK
Canada	member	CAD	42	₪4,518	1,670 CAD
United States	member	USD	42	₪4,518	1,228 USD
Australia	member	AUD	42	₪4,518	1,878 AUD
Japan	member	JPY	42	₪4,518	189,682 JPY
Bulgaria	accession candidate	EUR	45	₪4,680	1,170 EUR
UAE / Middle East (AED)	non-member partner market	AED	42	₪4,518	4,506 AED

Appendix B — Carrier and reinsurance view (Israel anchor book)

The carrier books 100% of risk GWP, pays the PHINS fee (25%), expects claims of 62% of GWP, cedes 18% by quota share, receives a 25% ceding commission on ceded premium and keeps 5% of GWP for capital, governance and compliance. Carrier margin in 2029: 5.7%. All five are adjustable factors; the table restates on every change.

Metric	2027	2028	2029	2030	2031
Risk GWP	₪54.2M	₪266.7M	₪733.3M	₪1.33B	₪1.87B
PHINS fee	₪13.6M	₪66.7M	₪183.3M	₪331.3M	₪467.5M

Metric	2027	2028	2029	2030	2031
Expected claims	₪33.6M	₪165.4M	₪454.7M	₪821.7M	₪1.16B
Ceded premium	₪9.8M	₪48.0M	₪132.0M	₪238.5M	₪336.6M
Ceded claims	₪6.1M	₪29.8M	₪81.8M	₪147.9M	₪208.7M
Ceding commission	₪2.4M	₪12.0M	₪33.0M	₪59.6M	₪84.1M
Carrier own expenses	₪2.7M	₪13.3M	₪36.7M	₪66.3M	₪93.5M
Retained premium	₪44.5M	₪218.7M	₪601.3M	₪1.09B	₪1.53B
Carrier result	₪3.1M	₪15.1M	₪41.5M	₪75.0M	₪105.8M
Carrier margin	5.7%	5.7%	5.7%	5.7%	5.7%

Appendix C — Regulatory pathway by market

Market	OECD status	Supervisor	Pathway
Israel	member	Capital Market, Insurance and Savings Authority	Life insurance with lifelong disability mechanism filed through a licensed carrier; PHINS as the technology / MGA layer. Pre-ruling track opened 12 October 2026.
Portugal	member	ASF — Autoridade de Supervisão de Seguros e Fundos de Pensões	Solvency II carrier partner; PHINS operates as outsourced distribution and administration under EIOPA outsourcing guidelines.
Western Europe (EUR)	member region	National competent authorities under EIOPA (Solvency II)	One Solvency II carrier passports the product; PHINS is the technology partner in each country.
Sweden	member	Finansinspektionen	Top-up to vårdförsäkring through a licensed life company; PHINS platform under outsourcing agreement.
Canada	member	OSFI (federal) and provincial regulators	Federally regulated life insurer partner; provincial licensing for distribution.
United States	member	State insurance departments (NAIC framework)	State-by-state product filing through a licensed carrier; PHINS as TPA / technology provider.
Australia	member	APRA (prudential) and ASIC (conduct)	Life company partner; disability income sustainability governance applies to pricing.
Japan	member	Financial Services Agency (JFSA)	Life insurer partner beside the public LTC levy; PHINS as the digital severity layer.
Bulgaria	accession candidate	Financial Supervision Commission	Partner-led top-up (bancassurance or MGA); public-side lapse thesis.
UAE / Middle East (AED)	non-member partner market	Central Bank of the UAE (insurance supervision)	Licensed local insurer partner with visible reinsurance retention structure.

Appendix D — Technology architecture and security standard

Census (live)	Count
Service modules (`services/*.py`)	136
Service packages	6
API modules (`web_portal/api_*.py`)	8
Repositories (`database/repositories/*_repository.py`)	20
Security modules (`security/*.py`)	14
Test files	288
Agents with golden sets	2

Pillar	Standard
Pricing kernel	One writer for premium decomposition (`services/pricing_kernel.py`): annual, monthly, mortality PV, disability PV, savings, expense, profit, with a deterministic integrity hash. Sandbox, simulator, IFRS 17 waterfall and the actuary dashboard reprice through it.
Data integrity	Append-only, hash-chained platform ledger; every balance and decision reproducible from postings. Repairs write a forensic before/after journal first and fail closed.
AI governance	Agents recommend, humans decide: every decision is logged, thresholds are proposed read-only and promoted only through an audited admin step, golden sets gate CI, and structured LLM output that fails validation falls back to the deterministic result.
Evidence pipeline	Facts carry provenance (source snippet, offsets, page, timestamp); contradictions are recorded, never silently resolved; shadow models score beside the rules and never change a decision.
Durable agent state	Agent artefacts are SHA-256 checksummed on load; a generalized job queue with retries, dead-letter and idempotency keys runs documents and agent routes asynchronously.
Identity & privacy	One writer for a customer's national ID + nationality; records carry only hash + last-4; the number lives in the vault and is never returned.
Security	Vault, key ring, token service, request sanitizer, intrusion detector, firewall, file scanner and confidential-access gate reused by every surface; secrets never in code.
Chat intake	Phin conversational policy and claim intake runs beside the classic forms and finalises through the same policy / claim pipelines, so underwriting, billing and ledger paths are unchanged.
Marketplace & payments	Health wallet, holds, payment intents, settlements, remittances and outbox events with coverage-aware ranking of suppliers.
Document standard	Every generated report carries the PHINS letterhead (navy / gold gradient, shield emblem, Inter + Space Grotesk) through one renderer; chrome never changes figures or checksums.

Appendix E — Data integrity and methodology

Identities computed on this render:

Identity	Holds
Anchor book equals the Investor Meeting book (in-force path, GWP, opex, 5-year extension)	yes

Identity	Holds
Kernel specimen (age 42, published tables) prices at ₪4,518	yes
PHINS take + carrier share = risk GWP, every year	yes
PHINS share + partner share = take pool, every year	yes
Group = anchor book + partner markets, every year	yes
Ceded + retained premium = risk GWP, every year	yes
Use-of-funds shares sum to 100%	yes
Savings flow is outside risk GWP and never split 25 / 75	yes
Appraisal uses the pitch-dashboard simulator's formula	yes
No planning assumption writes public evidence, the ledger or the actuarial store	yes
All identities hold	yes

Factor register (every adjustable assumption, its default and bounds):

Group	Factor	Default	Min	Max	Note
Anchor book — Israel	Annual risk premium (ILS, kernel specimen)	₪4,518	₪1,000	₪20,000	Pricing-kernel quote: age 42, life ILS 1,000,000, disability ILS 250,000, published risk_reference_v1 tables (0.25 / 0.20 per 1,000 monthly).
Anchor book — Israel	PHINS platform take (share of risk GWP)	25%	5%	60%	The carrier keeps the remainder (75% at default). Savings flow is never split 25/75.
Anchor book — Israel	Persistency of prior in-force	92%	70%	99%	Churn = 1 – persistency (8% at default).
Anchor book — Israel	First-year persistency of new issues	96%	70%	100%	
Anchor book — Israel	New-issue path scale (× 25k / 75k / 150k / 150k / 150k)	1×	0.1×	3×	1.0 is the Investor Meeting book.
Anchor book — Israel	Opex intensity scale (× ILS per average life)	1×	0.3×	3×	Intensity is cost ÷ average in-force by plan year, inherited from the retired small book.
Anchor book — Israel	Share of in-force electing the savings add-on	30%	0%	100%	
Anchor book — Israel	Savings add-on (× risk premium)	3×	0×	10×	Savings is a separately licensed flow, not insurance GWP.
OECD partnership expansion	Partner markets launched in 2028	1	0	6	Gate 7 (24,000 in-force, Series A readiness) precedes the first partner launch.

Group	Factor	Default	Min	Max	Note
OECD partnership expansion	Partner markets launched in 2029	2	0	6	
OECD partnership expansion	Partner markets launched in 2030	3	0	6	
OECD partnership expansion	Partner markets launched in 2031	3	0	6	
OECD partnership expansion	Partner-market ramp (× Israel new-issue path)	0.5×	0.05×	3×	Each partner market follows the Israel year-1..n ramp from its launch year, scaled.
OECD partnership expansion	PHINS share of the take in partner markets	60%	10%	100%	The local partner keeps the rest and carries distribution and local operations.
OECD partnership expansion	PHINS opex intensity in partner markets (× Israel)	0.35×	0.05×	1.5×	Platform, actuarial and compliance support only; distribution sits with the partner.
Carrier & reinsurance view	Expected claims ratio (share of risk GWP)	62%	20%	95%	Scenario Lab Israel default. Planning assumption, not reported evidence.
Carrier & reinsurance view	Quota-share cession (share of risk GWP)	18%	0%	90%	Scenario Lab Israel default.
Carrier & reinsurance view	Ceding commission (share of ceded premium)	25%	0%	50%	
Carrier & reinsurance view	Carrier own expenses (share of risk GWP)	5%	0%	30%	Capital, governance and compliance kept by the carrier; distribution, underwriting, claims and billing run on PHINS inside the take.
Capital & round	Seed round (ILS)	₪6,000,000	₪1,000,000	₪50,000,000	
Capital & round	Seed pre-money (ILS)	₪24,000,000	₪1,000,000	₪500,000,000	Manual ask; the appraisal below is the actuarial reference, not the ask.
Capital & round	Series A buffer over peak cumulative need	25%	0%	100%	
Capital & round	Use of seed — product & technology	40%	0%	100%	
Capital & round	Use of seed — regulatory, actuarial & reinsurance	20%	0%	100%	

Group	Factor	Default	Min	Max	Note
Capital & round	Use of seed — distribution & local partnerships	25%	0%	100%	
Capital & round	Use of seed — operations & reserve	15%	0%	100%	The four use-of-funds shares must sum to 100%.
Actuarial appraisal	Discount rate (WACC)	35%	5%	90%	
Actuarial appraisal	Exit multiple (× 2029 net revenue)	4×	0.5×	30×	
Actuarial appraisal	Prudence margin	15%	0%	60%	
Presentation	Planning FX (ILS per USD)	3.68	2	6	Planning pin shared with the Scenario Lab; not live FX, never written into evidence.

Method: in-force follows `eoy = round(prior × persistency) + round(new × first-year persistency)`, average in force is the mid-point, risk GWP = average in force × premium, PHINS revenue = GWP × take, opex = intensity (ILS per average life, by plan year) × average in force. Partner cohorts follow the same recursion from their launch year at the ramp scale; group = anchor + partners. Funding is derived from the group cash curve. The appraisal is PV(EBITDA 2027–2029) + exit multiple × 2029 net revenue, discounted at WACC, less prudence.

F.4 Funding

Line	Value
Seed / pre-money / post-money	₪6.0M / ₪24M / ₪30M
Seed dilution	20%
2027 burn (anchor book EBITDA)	₪18.8M
Runway on seed at the 2027 burn rate	3.8 months
Peak cumulative need (group)	₪20.2M
Series A indication (need – seed, + 25% buffer)	₪18.0M
First EBITDA-positive year (group)	2029
Cumulative EBITDA positive (group)	2029
Use of seed — product & technology	₪2.4M (40%)
Use of seed — regulatory, actuarial & reinsurance	₪1.2M (20%)
Use of seed — distribution & local partnerships	₪1.5M (25%)

Line	Value
Use of seed — operations & reserve	₪0.9M (15%)
Actuarial appraisal (anchor book)	₪264.6M at 35% WACC, 4.0× 2029 net revenue, 15% prudence

Appendix G — Milestone and governance calendar

When	Gate
12 Oct 2026	Regulatory pre-ruling meeting with the Capital Market, Insurance and Savings Authority (Jerusalem); MGA bridge and filing scope.
Q4 2026	Seed close (₪6.0M on ₪24M pre-money); carrier and reinsurance term sheets for the first contract.
1 Jan 2027	Gate 5 — sales begin on the licensed carrier's paper through the PHINS platform (Phin chat intake and classic forms).
H1 2027	Gate 6 — first 1,000 policies in force; Appointed Actuary review of experience against the kernel.
Q4 2027	Gate 7 — 24,000 end-of-year in-force; Series A readiness; first partner-market preparation.
2028	First partner market live under a local licensed carrier; Series A (₪18.0M indicative) funds scale, not survival.
2029	230,554 in force in Israel; group EBITDA positive (2029); 3 partner markets live.
2031	10 markets on one platform; 1,057,350 lives; ₪749.1M PHINS revenue at a 57% EBITDA margin.

Appendix H — Glossary

- **ADL-3** — Three or more activities of daily living permanently lost — the objective severity trigger of the lifelong disability mechanism.
- **Anchor book** — The Israel plan that every surface reconciles to: kernel premium, 25% / 75% split, persistency path, intensity-scaled opex.
- **Carrier of record** — The locally licensed insurer whose paper the contract is written on; PHINS is the technology / MGA layer.
- **Content hash** — SHA-256 over the factor inputs and every money line; identical inputs reproduce identical figures.
- **Kernel** — `services/pricing_kernel.py`, the single writer for premium decomposition.
- **Persistency** — Share of in-force that remains after a year (92% prior book, 96% first-year at default).
- **PHINS take** — The platform share of risk GWP (25% at default) that pays for distribution, underwriting, claims, billing and the agents.
- **Quota share** — Proportional reinsurance: the reinsurer takes the cession share of premium and claims and pays a ceding commission.
- **Savings flow** — The separately licensed savings add-on (30% election × 3.0 at default); never insurance GWP, never split with the carrier.
- **Series A indication** — Peak cumulative cash need less the seed, plus the buffer factor, rounded up to ₪0.5M — derived, not typed.
