

PHINS — Grove VC Follow-up Brief (24 September 2026) · 30-minute Zoom 1:1 with Mr. Lotan Levkovitch

Internal · Confidential — 30-minute Zoom 1:1 with Mr. Lotan Levkovitch
(Partner, Grove VC), the same host as the 19 August 2026 investor evening.
This call is a pitch. The aim is to move from stage interest to an investment step. Figures below are the Investor Meeting book (#investor-meeting-section). Do not invent a second set of numbers.

Meeting facts

Item	Detail
Date	24 September 2026
Time	TBC · 30 minutes (hard timebox)
Format	Zoom · 1:1 with the same investor
Counterparty	Mr. Lotan Levkovitch — Partner, Grove VC
Continues	Grove VC investor evening, 19 August 2026 (#grove-vc-meeting-19aug)
Source of figures	Investor Meeting & Business Plan (#investor-meeting-section)
Status	Scheduled
Pack	Pitch dashboard — Grove VC 24.9 section

Purpose: walk, in one flowing conversation, the modified system as it stands for investment, the regulatory phase, the technology, and why that stack is a deep-tech answer for insurance and finance — then ask for a named investment step.

Elevator — 30 seconds

On 19 August the room heard the cover gap. This call is the system behind that talk. PHINS is a production insurance operating system: AI recommends, a hash-chained ledger decides, and a licensed carrier holds the risk. Israel is in the regulatory build phase; sales start only after Gate 5, on 1 January 2027. The ask is the same book: **ILS 6.0M seed on ILS 24M pre-money (ILS 30M post)**.

1 · The modified system

What changed relative to a slide-only pitch is that the operating system is

already built and the go-to-market is a gated regulatory phase, not a rewrite.

- **Production OS.** Policy, underwriting, billing, claims, reinsurance, and the audit log run on one platform. Module count is the live platform fact (planning display: 113 service modules).

- **Capital-light digital MGA.** PHINS earns a **25%** take on risk gross written premium. The licensed carrier holds the **75%** insurance take. Claims reserves are not PHINS revenue.

- **One Israel book.** Published-table premium **ILS 4,518** a year.

End-of-year in-force **24,000 / 94,080 / 230,554** (2027 / 2028 / 2029).

Average in-force **12,000 / 59,040 / 162,317**.

Risk GWP **ILS 54,216,000 / 266,742,720 / 733,348,206**.

PHINS net revenue (25%) **ILS 13,554,000 / 66,685,680 / 183,337,052**.

- **Integrity contract.** AI and BI may recommend. They never post. The append-only ledger is the system of record.

2 · Technology — deep tech for insurance and finance

The saving is not a thinner call centre. It is a different control system for a regulated money flow.

Function	What the technology does	Planning automation
Underwriting	Severity models decide in minutes; a person sees only flagged edge cases	~92%
Billing	Invoicing, auto-pay, and dunning post on the ledger	~96%
Claims	AI triage and fraud signals; a person adjudicates complex or contested claims	~88%
Distribution	Digital-first onboarding plus a tooled agent ecosystem	Digital-first
Record	Hash-chained ledger; every recommendation is auditable	AI recommends, ledger decides

That is the deep-tech fit. Insurance and finance fail long-duration cover when human touch is priced into every policy. PHINS keeps human judgment where it changes the outcome — edge underwriting, contested claims, governance — and automates the rest. A new market is a regulatory adapter and a filing, not a second codebase. Expense ratio is planned to improve about 1.5 percentage points a year through that automation (Scenario Lab; adjustable; not an actuarial projection).

3 · Regulatory phase

Sales do not start until the gates clear. Capital is released against completion.

Gate	When	What must be true
0	Q3 2026	Seed closed; team and Chief Actuary engaged
1	Q3 2026	Policy wording, IP, reinsurance term sheet, carrier / MGA structure
2	Q4 2026	Israel launch set complete; Appointed-Actuary pricing sign-off
3	Q4 2026	Security audit, ledger integrity check, UAT
4	Q4 2026	Capital Market, Insurance & Savings Authority path; distribution agreements
5	1 Jan 2027	Commercial launch — first policies
6	Q2 2027	First 1,000 active policies; unit economics vs plan
7	Q4 2027	24,000 end-of-year in-force; Series A readiness

PHINS Technologies Ltd. is not a licensed insurer. Risk sits with a licensed Israeli carrier and/or approved reinsurance. The regulatory application memorandum is the written path; this call does not treat a filing as an approval.

4 · The investment step

Same basis as the Investor Meeting book — not a new price.

Item	Figure
Ask	ILS 6.0M seed / build round
Valuation	ILS 24M pre-money · ILS 30M post-money
Use of funds	12 months to 1 Jan 2027. Platform ILS 1,950,000 + cloud/AI ILS 470,000 (40.3%); legal, regulatory & licensing ILS 880,000 (14.7%); actuarial ILS 520,000 (8.7%); QA & security ILS 430,000 (7.2%); pre-launch marketing ILS 650,000 (10.8%); G&A ILS 400,000 (6.7%); contingency ILS 700,000 (11.7%). The shekel lines sum to ILS 6,000,000.
2029 shape	PHINS net revenue ILS 183.3M · EBITDA margin +36% · 2028 already EBITDA-positive on this book

Primary path: an investment into the round. If he wants an operating seat, the Investor Meeting configurator prices co-founder and investor structures on this same pre-money so stakes stay comparable. Do not open a second valuation in the room.

30-minute run of show — hard timebox

Minutes	Segment	Say this
00–03	Bridge	Thank him for 19 August. This call is the system, the regulatory phase, and a path to invest. Hard stop at 30:00.
03–09	Modified system	Production OS, digital MGA, 25% / 75% split, one Israel book (ILS 4,518, in-force path). AI recommends; the ledger decides.
09–16	Technology	Underwriting, billing, claims, distribution. Why this is deep tech for insurance and finance: auditable automation, not a black box.
16–22	Regulatory phase	Gates 0–5. Authority path. No sales before 1 January 2027. Not a licensed insurer.
22–27	Investment step	ILS 6.0M / ILS 24M pre / ILS 30M post. Use of funds in one sentence. Ask what step he can take.
27–30	Close	Named next step and date. NDA if not already signed. Log the diary.

Run-of-show rules: one speaker, Zoom, no live workshop. Park Scenario Lab and the valuation configurator unless he asks. If he asks for a different price, show the Investor Meeting book and do not quote a new one. Hard stop at 30:00.

Pre-call prep

- **This brief** and the 19 August presentation brief.
- **Investor Meeting book** on the pitch dashboard — the only figure source.
- **Newest investment deck** — `/internal/phins-investment-deck.html`.
- **Extended plan** only if he asks for section 10, the ask, or deal structures — `/internal/phins-investor-business-plan.html`.
- **Regulatory application (EN)** — `/investor-docs/israel-regulatory-application-en.pdf` (offer HE).
- **NDA** — `/legal/nda.html`.
- Confirm the Zoom link and a 30-minute hard stop.

Decision outputs — leave the call with

- 1 A read from **Mr. Lotan Levkovitch / Grove VC** on joining the **ILS 6.0M** round.
- 2 A **named next step and date** (diligence call, NDA, or term-sheet review).
- 3 Any open question on carrier, actuary, or the Authority path — answered from the gates, not from a new model.
- 4 The outcome logged in the Meeting Diary.

Data integrity notice: this brief is an operational admin preparation tool. Every financial figure is the Investor Meeting planning basis in ILS: seed ILS 6,000,000; pre-money ILS 24,000,000; post-money ILS 30,000,000; premium ILS 4,518; PHINS take 25%; in-force 24,000 / 94,080 / 230,554; risk GWP ILS 54,216,000 / 266,742,720 / 733,348,206; PHINS net revenue ILS 13,554,000 / 66,685,680 / 183,337,052. The build-budget shekel lines sum to ILS 6,000,000; the one-decimal shares are that same budget. These are forward-looking planning assumptions, not commitments or guidance. Automation rates are published planning benchmarks, not actuarial projections. This document does not write to the platform ledger.
